

INNOVASITE™

Landfill traffic management made simple

With **INNOVASITE™** you can now efficiently manage trucks traffic to your landfill, transshipment, compost and recycling sites. With all its powerful features our solution remains available at a very low cost. Based on the RFID technology, truck logging is done quickly and reliably. Developed to minimise the investment, **INNOVASITE™** incorporates all the most recent developments in the RFID technology. The transponders used are very low cost and can be read from up to 5 meters (15 ft). Many transponder types are available to meet all your needs.

INNOVASITE™ offers a complete solution that includes the following:

- Complete software package
- Ultra high frequency RFID transponders
- High performance RFID reader at the site gate
- Color video camera for a view of the site entrance through the internet

Access control software

Our software performs every necessary tasks required for an efficient management of the system. The user interactions have been reduced to the minimum to allow a quick set-up and a user friendly and reliable operation. Our solution can also generate reports and export those to Excel™.

Simple and versatile structure

The software package is adapted to many situations

- Data hosting on external or internal server
- Wireless data transfer on the cell phone network
- Management of short period of time truck re-entrance
- Data can be used in other softwares
- Data transfer through the Internet

Amongst INNOVASITE™ advantages there are:

- Recording of all trucks entries to the sites
- Automatic control of multiple entries in a short laps of time
- Non approved truck control
- Remote management of the site

INNOVASITE™ is accessible through the Internet from anywhere in the world.

Turn Key Off the Shelf and Custom Solutions

Features:
